

The length of a script is determined by how many words are in it. We work on the equation that 70 words = 30 seconds. To calculate, divide the amount of words in the script by 70 ($1490/70 = 21.3$) round it down to 21, which means there are 21 x 30 second blocks. this makes the script 10.5 minutes long.

Standard Corporate 30 Second Voiceover \$45.00 *

Regional Voiceovers
